

Questions for breakout discussion

1. How do we plan for nature recovery?

- How can we ensure that 'net gain' plays a significant role in an area where there is very little development?
- Landownership is key for nature recovery. Should we re-think how we work with big landowners (eg our big estates) so that planning and development there is more closely linked to nature recovery?
- Do you see a significant role for offsetting? Will neighbouring authorities be looking to deliver their net gain inside the National Park?

2. How should our landscapes change?

Please can we ask you to self organise in your breakout group:

- **Introduce yourself**
- **Decide how you are going to run the discussion.**
- **If possible we ask for a volunteer to keep a brief note of the discussion in the chat and a volunteer to feedback to the whole workshop.**
